Applicare su capello decolorato in miscela 1:1.5 con Emulsiondor 10 vol. Tonalizzazione progressiva con tempi di posa da 5 a 10 minuti a seconda dell'intensità del riflesso desiderata. Le ciocche indicano il risultato che si otterrebbe su capelli molto decolorati e con tempo di posa 20 minuti.

Apply on bleached hair in a 1:1.5 blend with 10 vol. Emulsiondor. Progressive tonalization with development time at discretion of the hairstylist depending on the desired intensity of the reflection. The locks indicate the expected result on very bleached hair and with a development time of 20 minutes.

Colorazione superschiarente in miscela 1:1.5 con Emulsiondor a 40 vol. Applicare su capelli dal tono 7-8 (biondo/biondo chiaro) a 10 (biondo extra chiaro). Schiaritura fino a 4 toni.

Super brightening colouring cream in a 1:1.5 blend with 40 vol. Emulsiondor. Apply on hair from tone 7-8 (blonde/bright blonde) to tone 10 (extra bright blonde). Brightening up to 4 tones.

MODO D'USO

1. - COME SUPERSCHIARENTE SU CAPELLI CON BASE CHIARA (DA TONO 7-8 A TONO 10)

Per sfruttare la massima intensità di schiaritura miscelare in una bacinella non metallica la crema colorante con emulsione ossidante a 30 o 40 vol. nel rapporto di miscelazione 1:1.5 fino ad ottenere una miscela cremosa ed omogenea.

PRIMA APPLICAZIONE (CAPELLI NATURALI MAI COLORATI): su capelli naturali da tono 7-8 (biondo/biondo chiaro) a tono 10 (biondo extra chiaro).Distribuire uniformemente la miscela preparata su lunghezze e punte dei capelli, lasciando in posa per 10-20 minuti. Al termine del tempo di posa preparare nuovamente la stessa miscela colorante e distribuirla uniformemente anche sulle radici lasciando in posa per altri 40-45 minuti.

RITOCOCCO (CAPELLI TINTI): distribuire uniformemente la miscela preparata sui capelli di nuova crescita, iniziando dalla nuca, e lasciare in posa 40 minuti circa. Distribuire poi la miscela su lunghezze e punte, emulsionare e lasciare agire per altri 5 minuti.

TRATTAMENTO FINALE: completata l'operazione di schiaritura e del relativo tempo di posa, versare poca acqua tiepida sui capelli ed emulsionare bene. Risciacquare poi abbondantemente i capelli finché l'acqua scorra limpida. A seguire effettuare uno shampoo ed applicare una maschera a pH acido per prevenire l'ossidazione e lo scarico del colore, favorendone così una maggiore durata.

CONSIGLI OPERATIVI: normalmente non è necessario lavare i capelli prima dell'applicazione. In presenza di capigliature molto sporche o molto laccate, eseguire un leggero shampoo preventivo **possibilmente senza intervenire sulle radici**. Asciugare l'eccesso d'acqua con una salvietta, poi procedere all'applicazione della miscela superschiarente su capelli ancora umidi.

I tempi di posa devono essere ridotti dopo permanenti o stirature.

RISULTATO DESIDERATO	RAPPORTO DI MISCELAZIONE	EMULSIONE OSSIDANTE	TEMPO DI POSA
Per schiariture forti (3-4 toni)	1:1.5	40 VOL.	40 - 45 MINUTI
Per schiariture medie (2-3 toni)	1:1.5	30 VOL.	40 - 45 MINUTI

2. - COME TONALIZZANTE DOPO UN TRATTAMENTO DI DECOLORAZIONE

In una bacinella non metallica miscelare la crema colorante con emulsione ossidante a 10 vol. nel rapporto di miscelazione 1:1.5 fino ad ottenere una miscela cremosa ed omogenea. Distribuire uniformemente la miscela colorante preparata su radici, lunghezze e punte simultaneamente, lasciando in posa da 5 minuti a 20 minuti, a seconda dell'intensità del riflesso desiderata.

TRATTAMENTO FINALE: completata l'operazione di tonalizzazione e del relativo tempo di posa, versare poca acqua tiepida sui capelli ed emulsionare bene. Risciacquare poi abbondantemente i capelli finché l'acqua scorra limpida. A seguire effettuare uno shampoo ed applicare una maschera a pH acido per prevenire l'ossidazione e lo scarico del colore, favorendone così una maggiore durata.

CONSIGLI OPERATIVI: i tempi di posa devono essere ridotti dopo permanenti o stirature.

RAPPORTO DI MISCELAZIONE	EMULSIONE OSSIDANTE	TEMPO DI POSA	DURATA DEL TRATTAMENTO
1:1.5	10 VOL.	da 5 a 20 MINUTI a seconda dell'intensità di riflesso desiderata	8/10 LAVAGGI

METHOD OF USE

1. - AS A SUPER BLEACHING PRODUCT ON HAIR WITH A BRIGHT BASE (FROM TONE 7-8 TO 10)

In order to exploit the maximum bleaching intensity, blend, in a non-metallic container, the colouring cream with an oxidizing emulsion from 30 to 40 vol. with a mix ratio of 1:1.5, until a creamy and homogeneous blend is obtained.

FIRST APPLICATION (NATURAL NEVER coloured HAIR): on natural hair from tone 7-8 (blonde/ bright blonde) to tone 10 (extra bright blonde). Evenly distribute the prepared blend on the length and ends of the hair, allowing it to rest for 10-20 minutes. When the development time is over, prepare the same colouring blend again and distribute it evenly also on the roots, allowing it to rest for 40-45 more minutes.

RETOUCH (COLOURED HAIR): evenly distribute the prepared blend on the root regrowth, beginning with the nape and allow it to rest for about 40 minutes. Afterwards, distribute the blend on length and ends, emulsify and allow it to rest for 5 more minutes.

FINAL TREATMENT: when the bleaching operation and the colour developing are completed, pour little lukewarm water on hair and emulsify accurately. Afterwards, rinse the hair abundantly until the water is clear. Subsequently, wash the hair and apply an acid pH mask to prevent oxidizing and the discharging of colour. This procedure prolongs the duration of the colour.

OPERATIONAL ADVICE: normally, it is not necessary to wash the hair before the application. If the hair is very dirty or very lacquered, make a preparatory light shampoo, **possibly without acting on the roots**. Dry the excess of water with a towel, and then apply the super bleaching blend on damp hair. Development time must be reduced after permanent and straightening treatments.

DESIRED RESULT	MIX RATIO	OXIDIZING EMULSION	DEVELOPMENT TIME
For strong bleaching (3-4 tones)	1:1.5	40 VOL.	40 - 45 MINUTES
For medium bleaching (2-3 tones)	1:1.5	30 VOL.	40 - 45 MINUTES

2. - TO PIGMENT THE HAIR AFTER A BLEACHING TREATMENT

In a non-metallic container, blend the colouring cream with a 10 vol. oxidizing emulsion with a mix ratio of 1:1.5 until the blend is creamy and homogeneous.

Evenly distribute the prepared colouring blend on roots, length and ends simultaneously, allowing it to rest from 5 to 20 minutes, depending on the intensity of the desired reflection.

FINAL TREATMENT: after completing the pigmenting operation and when its development time is over, pour little lukewarm water on the hair and emulsify accurately. Afterwards, abundantly rinse the hair until the water is clear. Subsequently, wash the hair and apply an acid pH mask to prevent oxidizing and the discharging of colour, this procedure prolongs the duration of the colour.

OPERATIONAL ADVICE: development time must be reduced after permanent and straightening treatments.

MIX RATIO	OXIDIZING EMULSION	DEVELOPMENT TIME	TREATMENT DURATION
1:1.5	10 VOL.	from 5 to 20 MINUTES depending on the desired intensity of reflection	8/10 WASHES
